ABSTRACT:

PURPOSE: To provide the titled depilator having analgesic effect to suppress the pain caused by the peeling of the depilation plaster from the skin, by compounding a pressure-sensitive adhesive base with hydrous ethanol extract of SAISHIN (rhizome of Asiasarum sieboldi).

CONSTITUTION: The dried root and rhizome of Asiasarum sieboldi (SAISHIN) is crushed to small pieces, immersed in 2∼4 times weight (based on the dried herb) of hydrous ethanol (ethanol content of 20∼70wt%), refluxed under heating for 3∼5hr, and filtered. The extraction is repeated twice, and the filtrates are joined together and optionally concentrated to obtain the extract

of SAISHIN. The objective improved pressure-sensitive adhesive depilator can be produced by adding 0.05∼0.5wt% extract (in terms of anhydrous state) to a pressure-sensitive adhesive depilator. The depilator is preferably a pressure- sensitive adhesive composed mainly of a thermoplastic elastomer such as styrene-isoprene-styrene copolymer used in a depilatory tape, a depilatory wax composed mainly of hydrogenated rosin, or depilatory jelly composed mainly of starch syrup.
